

Metomic x HIPAA

What is HIPAA?

HIPAA stands for the Health Insurance Portability and Accountability Act. It was brought into law in 1996 in the US, to protect patients' PHI (Protected Health Information).

HIPAA ensures that any healthcare organisations are taking the right steps to protect data they hold, such as personal details, medical bills, and information on medication that patients may be taking.

Why is it important?

The guideline ensures that customer health data is protected, and their privacy is kept intact.

It's vital to comply with HIPAA, otherwise you could face penalties of up to \$1.5 million, legal repercussions, and a negative impact on your company's reputation.

How does Metomic help you comply with HIPAA?

Metomic automatically redacts sensitive data once it's shared, or after a set retention period. It enables your employees to get on with their jobs, while locking down your most sensitive data.

Metomic educates your employees on your security policies whenever they share sensitive data, with real-time notifications to let them know where they're going wrong.

Metomic can automatically configure access controls in SaaS assets, ensuring only the right people have access to the right data.
